Why We Are the Best

North Star has earned a reputation for manufacturing and distributing attractive, high-quality, energy efficient vinyl windows and doors.

North Star's manufacturing system ensures all our vinyl windows and doors are built to meet or exceed industry standards. Our products are tested and certified by Canadian Standards Association and comply with American Architectural Manufacturers Association (AAMA) standards. We're so confident in our windows and doors that we back them with a transferable, limited lifetime warranty.

When you buy North Star products, you know you're getting the best quality and value for your investment.

The strong relationship we have with our various manufacturing partners has helped us maintain our reputation for leadership, innovation and the production of windows and doors of impeccable quality.

Committed to Green

At North Star, we care about the environment inside your home and outside it as well. We're constantly striving to save energy and eliminate waste throughout our EnviroMade™ production process in order to ensure a greener future for everyone.

Recycling excess materials

- PVC All excess PVC scrap is recycled to make products such as vinyl fence and decking.
- Cardboard Excess cardboard is recycled into products such as cellulose insulation.
- Glass Scrap glass is recycled to use in road resurfacing.
- Scrap metal Excess scrap metal is reused by scrap-metal recyclers.

Reducing energy consumption

- Water Water from our glass-washing equipment is filtered for re-use.
- Engine oil Used engine oil from our truck fleet is collected and re-refined to make various oil products.
- **Heat** Heat that is generated from our equipment is re-directed into our plant to reduce overall energy costs.
- **Lighting** Our entire plant's lighting system uses energy efficient lights to reduce overall energy consumption.

North Star is committed to a greener future, not only in the energy efficient products we make, but also in how we make them.

1071 Picture Window (No Sash)

SPECIFICATIONS

Frame

Combined frame and stop profiles are extruded by North Star Windows from virgin PVC powder material. Frames are multi-chamber design for strength and energy efficiency. Frame is fusion welded ensuring a water and airtight seal as well as maximum strength and squareness. Frames are a full 3 ¼" depth.

Insulated Glass

Double or triple insulating glass with Edgetech silicone foam low conductive S-Class Super Spacer®. Pilkington Energy Advantage ™ Low E (hard coat) glass is standard. Cardinal Lodz-366® (soft coat) glass is optional as well as Pilkington Activ™ Self-Cleaning glass. Laminated glass is available consisting of 3mm glass, 3/8" airspace and two 3mm glass panes with a .030" clear interior membrane in-between. Heavy inert argon or krypton gas is optional for the air space between the glass panes.

Glazing

Insert neoprene setting blocks around perimeter of frame with application of silicone toe bead sealant to interior glazing cavity to stabilize glass movement. Furnish laid in insulated glass from interior side of frame against flexible vinyl fin weather-strip coextruded to exterior edge of frame. Install architectural profiled interior glazing stops with flexible co-extruded vinyl fin weather-strip against interior glass face.

Weather-Stripping

Profiled exterior frame edge and profiled interior glass stop have co-extruded flexible vinyl fin weather-strip which seals against exterior and interior glass faces.

Exterior and Interior Finishes

North Star standard vinyl extrusion has a clean, bright, white smooth finish. Nine North Star exterior textured color finishes (Ivory, Chestnut brown, Cocoa, Hickory, Sandalwood, Sable, Espresso, Midnight Black and Anthracite Grey) and four interior wood grains (Kolonial Oak, Stainable/Paintable Pine, Light Oak, and Walnut) are optional. Exterior color and interior wood grain are applied PVC laminate film with an acrylic overlay for exceptional UV protection. Exterior laminate is 200µm (microns) thick.

Special Options: Espresso, Midnight Black and Hickory can be applied on the interior as well as the exterior for this window type.

Grilles

Windows may be enhanced with North Star 5/16" narrow and 5/8" wide flat rectangular or 5/8" wide contoured grilles between the glass panes. 5/16" narrow grilles are available in white, pewter and brass. A combination of white or wood grain interior and colored exterior is optional for 5/8" wide flat grilles. 5/8" wide flat grilles are available in pewter, white or black on all sides. Contoured 3/4" wide grilles are optional in white or white/colored exterior.

Divided Lites

Classic simulated divided lites (SDL) are also available. SDL grilles are available in 7/8" and 2" widths. Standard SDL comes without airspace grille. Optional 1/4" X 5/16" pewter airspace grilles are available on double glazed units only. SDL grille bars are permanently applied to the interior and exterior glass surface.

Accessories

North Star offers a variety of vinyl accessories such as nailing fin, brick molds, drywall/wood return, couplers and jamb extensions.

Standards

North Star windows have been tested by an independent laboratory for air, water, structural and thermal performance requirements.

1072 Picture Window (With Sash) Details

VERTICAL SECTION

13

1171 Casement Window

SPECIFICATIONS

Frame and Sash

All frame and sash profiles are extruded by North Star Windows from virgin PVC powder material. Frames and sash are multichamber design for strength and energy efficiency. Frames and sash are fusion welded ensuring a water and airtight seal as well as maximum strength and squareness. Frames are a full 3 ¼" depth.

Insulated Glass

Double or triple insulating glass with Edgetech silicone foam low conductive S-Class Super Spacer®. Pilkington Energy Advantage ™ Low E (hard coat) glass is standard. Cardinal LoE³-366® (soft coat) glass is optional as well as Pilkington Activ™ Self-Cleaning glass. Laminated glass is available consisting of 3mm glass, 3/8" airspace and two 3mm glass panes with a .030" clear interior membrane in-between. Heavy inert argon or krypton gas is optional for the air space between the glass panes.

Glazing

Neoprene setting blocks are placed around glass in sash in diagonal pattern with silicone toe bead sealant to interior glazing cavity to stabilize glass movement. Furnish laid in insulated glass from interior side of sash against flexible fin weather strip extruded to exterior edge of sash. Install architectural profiled interior glazing stops with soft flexible fin weather-strip against interior glass face.

Triple Weather-Stripping

Two flexible dual durometer bulb type compression gaskets are located around perimeter of window frame to ensure air and water tight seal and maximum energy efficiency. One water repellant pile weather-strip with stiff fin type vapor barrier is located around perimeter of sash increasing energy efficiency and reducing dust and dirt from accumulating around sash cavity.

Hardware

Truth Maxim hardware has concealed hinges and heavy-duty roto gear operator which allow sash to open to 90° for ease of cleaning. The roto gear operator will hold the sash at any position. Sash lock pulls weather-stripped sash against dual compression bulb weather gasket on frame. Concealed multipoint sash locks are standard on units taller than 22″ in height. All steel components have Truth E-Gard™ coating for superior corrosion protection. Snubber hardware on the frame and sash ensure compression of the bulb weather-strip opposite to the lock side.

Egress

Consult local building codes to verify that the window ordered meets or exceeds egress requirements for your area. Special egress hardware is available for casement windows that enable narrow sizes to meet egress codes.

Hardware Options

Standard Truth Maxim roto gear operator and sash locks are standard in white with contour handle. Truth Encore folding handle with roto gear nesting cover is available in white, Black, brushed antique chrome, satin nickel and oil rubbed bronze finish.

Note: Limit sash opening hardware, safeguard casement window, or opening control devices are available.

Screen

North Star Heavy Duty EZ-Screens are roll formed from heavy duty .025" thick aluminum coil flatstock and screened with anti-glare fiberglass cloth. Screen frame has spring loaded corner keys for easy removal and installation of screen. Standard screens are painted white or black. Additional option: laminated screen frames with mitered corners that include spring loaded corner keys for easy removal and installation are available in North Star interior/ exterior colors.

Exterior and Interior Finishes

North Star standard vinyl extrusion has a clean, bright, white smooth finish. Nine North Star <u>exterior</u> textured color finishes (Ivory, chestnut brown, Cocoa, Hickory, Sandalwood, Sable, Espresso, Midnight Black and Anthracite Grey) and four <u>interior</u> wood grains (Kolonial Oak, Stainable/Paintable Pine, Light Oak, and Walnut) are optional. 1173 Awning Window Details

VERTICAL SECTION

1271 Double Hung Tilt Window

SPECIFICATIONS

Frame and Sash

All frame and sash profiles are extruded by North Star Windows from virgin PVC powder material. Frames and sash are multichamber design for strength and energy efficiency. Frames complete with recessed drain covers with reticulated foam to keep insects out. Frames and sash are fusion welded ensuring a water and airtight seal as well as maximum strength and squareness. Frames are a full 3 ¾" depth.

Insulated Glass

Double or triple insulating glass with Edgetech silicone foam low conductive S-Class Super Spacer®. Pilkington Energy Advantage ™ Low E (hard coat) glass is standard. Cardinal Lodz-366® (soft coat) glass is optional as well as Pilkington Activ™ Self-Cleaning glass. Laminated glass is available consisting of 3mm glass, 3/8″ airspace and two 3mm glass panes with a .030″ clear interior membrane in-between. Heavy inert argon or krypton gas is optional for the air space between the glass panes.

Glazing

Insert neoprene setting blocks around perimeter of sash with application of silicone toe bead sealant to interior glazing cavity to stabilize glass movement. Furnish laid in insulated glass from interior side of sash against flexible vinyl fin weather-strip coextruded to exterior edge of sash. Install interior glazing stops with flexible co-extruded vinyl fin weather-strip against interior glass face.

Multiple Weather-Stripping

Water repellant pile weather-strips with stiff fin type vapor barrier are located around perimeter of each operable window sash to ensure air and water tight seal and maximum energy efficiency. Two additional pile weather-strip with stiff fin type vapor barrier are located on the inside of window frame at sill and jamb location for additional protection against air and water penetration.

Hardware

Two die-cast cam locks and keeper are assembled onto each operable sash for weatherability and security. Windows less than 27 ½" in width require one cam lock and keeper. Each sash is operated with two constant force coil spring balance hardware. True recessed finger latches release both top and bottom sash to allow sash to tilt in for ease of cleaning. Full length sash pull handles are extruded into the interior glazing stop profile. Standard color is white.

Standards

North Star windows have been tested by an independent laboratory for air, water, structural and thermal performance requirements.

Egress

Consult local building codes to verify that the window ordered meets or exceeds egress requirements for your area. Special egress hardware is available for double hung tilt windows that enable narrow sizes to meet egress codes.

Hardware Options

Self-latching locks and keepers are available as an option. Black finish color locks, keepers and tilt latches are standard features when Kolonial Oak or Stainable/Paintable pine laminated interior finish is ordered.

Note: Limit sash opening features are available. Consult your North Star Sales Consultant for details.

Screen

North Star screens are roll formed from heavy .021" thick aluminum coil flatstock and screened with anti-glare fiberglass cloth. Screen frame has nylon injection molded corner key with pull tab. Screen frame is available in white or North Star's nine exterior colors. Double hung is standard with full screen.

Exterior and Interior Finishes

North Star standard vinyl extrusion has a clean, bright, white smooth finish. Nine North Star <u>exterior</u> textured color finishes (Ivory, chestnut brown, Cocoa, Hickory, Sandalwood, Sable, Espresso, Midnight Black and Anthracite Grey) and four <u>interior</u> wood grains (Kolonial Oak, Stainable/Paintable Pine, Light Oak, and Walnut) are optional. Exterior color and interior wood grain are applied PVC laminate film with an acrylic overlay for exceptional UV protection. Exterior laminate is 200µm (microns) thick.

<u>Special Options:</u> Espresso, Midnight Black and Hickory can be applied on the interior.

Grilles

Windows may be enhanced with North Star 5/16" narrow and 5/8" wide flat rectangular or 5/8" wide contoured grilles between the glass panes. 5/16" narrow grilles are available in white, pewter and brass. A combination of white or wood grain interior and colored exterior is optional for 5/8" wide flat grilles. 5/8" wide flat grilles are available in pewter, white or black on all sides. Contoured 3/4" wide grilles are optional in white or white/colored exterior.

Divided Lites

Classic simulated divided lites (SDL) are also available. SDL grilles are available in 7/8" and 2" widths. Standard SDL comes without airspace grille. Optional 1/4" X 5/16" pewter airspace grilles are available on double glazed units only. SDL grille bars are permanently applied to the interior and exterior glass surface.

Accessories

North Star offers a variety of vinyl accessories such as nailing fin, brick molds, drywall/wood return, couplers and jamb extensions.

Two die-cast cam locks and keeper are assembled onto each operable sash for weatherability and security. Windows less than 27 ¼" in width require one cam lock and keeper. Each sash is operated with two constant force coil spring balance hardware. True recessed finger latches release both top and bottom sash to allow sash to tilt in for ease of cleaning. Full length sash pull handles are extruded into the interior glazing stop profile. Standard color is white.

Hardware Options

Self-latching locks and keepers are available as an option. Black finish color locks, keepers and tilt latches are standard features when Kolonial Oak or Stainable/Paintable laminated pine interior finish is ordered.

Note: Limit sash opening features are available. Consult your North Star Sales Consultant for details.

Screen

North Star screens are roll formed from heavy .021" thick aluminum coil flatstock and screened with anti-glare fiberglass cloth. Screen frame has nylon injection molded corner key with pull tab. Screen frame is available in white or North Star's nine exterior colors. Double slider has full screen.

Exterior and Interior Finishes

North Star standard vinyl extrusion has a clean, bright, white smooth finish. Nine North Star <u>exterior</u> textured color finishes (Ivory, chestnut brown, Cocoa, Hickory, Sandalwood, Sable, Espresso, Midnight Black and Anthracite Grey) and four <u>interior</u> wood grains (Kolonial Oak, Stainable/Paintable Pine, Light Oak, and Walnut) are optional. Exterior color and interior wood grain are applied PVC laminate film with an acrylic overlay for exceptional UV protection. Exterior laminate is 200µm (microns) thick.

<u>Special Options:</u> Espresso, midnight black, Hickory can be applied on the interior as well as the exterior for this window type.

Grilles

Windows may be enhanced with North Star 5/16" narrow and 5/8" wide flat rectangular or 5/8" wide contoured grilles between the glass panes. 5/16" narrow grilles are available in white, pewter and brass. A combination of white or wood grain interior and colored exterior is optional for 5/8" wide flat grilles. 5/8" wide flat grilles are available in pewter, white or black on all sides. Contoured 3/4" wide grilles are optional in white or white/colored exterior.

Divided Lites

Classic simulated divided lites (SDL) are also available. SDL grilles are available in 7/8" and 2" widths. Standard SDL comes without airspace grille. Optional 1/4" X 5/16" pewter airspace grilles are available on double glazed units only. SDL grille bars are permanently applied to the interior and exterior glass surface.

Accessories

North Star offers a variety of vinyl accessories such as nailing fin, brick molds, drywall/wood return, couplers and jamb extensions.

Standards

North Star windows have been tested by an independent laboratory for air, water, structural and thermal performance requirements.

Egress

Consult local building codes to verify that the window ordered meets or exceeds egress requirements for your area. Special egress hardware is available for double slider tilt windows that enable narrow sizes to meet egress codes

1272 Double Slider Tilt Window Details

VERTICAL SECTION

HORIZONTAL SECTION

SPECIFICATIONS

Note: Double Slider 1273, both sash slide

Frame and Sash

All frame and sash profiles are extruded by North Star Windows from virgin PVC powder material. Frames and sash are multichamber design for strength and energy efficiency. Frames complete with recessed drain covers with reticulated foam to keep insects out. Frames and sash are fusion welded ensuring a water and airtight seal as well as maximum strength and squareness. Frames are a full 3 ½" depth.

Insulated Glass

Double or triple insulating glass with Edgetech silicone foam low conductive S-Class Super Spacer®. Pilkington Energy Advantage ™ Low E (hard coat) glass is standard. Cardinal Lodz-366® (soft coat) glass is optional as well as Pilkington Activ™ Self-Cleaning glass. Laminated glass is available consisting of 3mm glass, 3/8" airspace and two 3mm glass panes with a .030" clear interior membrane in-between. Heavy inert argon or krypton gas is optional for the air space between the glass panes.

Glazing

Insert neoprene setting blocks around perimeter of sash with application of silicone toe bead sealant to interior glazing cavity to stabilize glass movement. Furnish laid in insulated glass from interior side of sash against flexible vinyl fin weather-strip coextruded to exterior edge of sash. Install interior glazing stops with flexible co-extruded vinyl fin weather-strip against interior glass face.

Multiple Weather-Stripping

Water repellant pile weather-strips with stiff fin type vapor barrier are located around perimeter of each operable window sash to ensure air and water tight seal and maximum energy efficiency. Two additional pile weather-strip with stiff fin type vapor barrier are located on the inside of window frame at sill and jamb location for additional protection against air and water penetration.

Hardware

Two die-cast cam locks and keeper are assembled onto each operable sash for weatherability and security. Windows less than 27 ¼" in width require one cam lock and keeper. Each sash is operated with two constant force coil spring balance hardware. True recessed finger latches release both top and bottom sash to allow sash to tilt in for ease of cleaning. Full length sash pull handles are extruded into the interior glazing stop profile. Standard color is white.

Accessories

North Star offers a variety of vinyl accessories such as nailing fin, brick molds, drywall/wood return, couplers and jamb extensions.

Hardware Options

Self-latching locks and keepers are available as an option. Black finish color locks, keepers and tilt latches are standard features when Kolonial Oak or Stainable/Paintable laminated pine interior finish is ordered.

Note: Limit sash opening features and mini angle locks are available. Consult your North Star Sales Consultant for details.

Screen

North Star screens are roll formed from heavy .021" thick aluminum coil flatstock and screened with anti-glare fiberglass cloth. Screen frame has nylon injection molded corner key with pull tab. Screen frame is available in white or North Star's nine exterior colors. Double slider has full screen.

Exterior and Interior Finishes

North Star standard vinyl extrusion has a clean, bright, white smooth finish. Nine North Star <u>exterior</u> textured color finishes (Ivory, chestnut brown, Cocoa, Hickory, Sandalwood, Sable, Espresso, Midnight Black and Anthracite Grey) and four <u>interior</u> wood grains (Kolonial Oak, Stainable/Paintable Pine, Light Oak, and Walnut) are optional. Exterior color and interior wood grain are applied PVC laminate film with an acrylic overlay for exceptional UV protection. Exterior laminate is 200µm (microns) thick.

<u>Special Options:</u> Espresso, midnight black, and Hickory can be applied on the interior as well as the exterior for this window.

Grilles

Windows may be enhanced with North Star 5/16" narrow and 5/8" wide flat rectangular or 5/8" wide contoured grilles between the glass panes. 5/16" narrow grilles are available in white, pewter and brass. A combination of white or wood grain interior and colored exterior is optional for 5/8" wide flat grilles. 5/8" wide flat grilles are available in pewter, white or black on all sides. Contoured 3/4" wide grilles are optional in white or white/colored exterior.

Divided Lites

Classic simulated divided lites (SDL) are also available. SDL grilles are available in 7/8" and 2" widths. Standard SDL comes without airspace grille. Optional 1/4" X 5/16" pewter airspace grilles are available on double glazed units only. SDL grille bars are permanently applied to the interior and exterior glass surface.

Standards

North Star windows have been tested by an independent laboratory for air, water, structural and thermal performance

Egress

VERTICAL SECTION

Bay & Bow Window

SPECIFICATIONS

Frame and Sash

All frame and sash profiles are extruded by North Star Windows from virgin PVC powder material. Frames and sash are multichamber design for strength and energy efficiency. Frames and sash are fusion welded ensuring a water and airtight seal as well as maximum strength and squareness. Frames are a full 3 %" depth.

Head and Seat

Standard head and seat is constructed of maintenance-free 3/4" white Formica®. Medium oak veneer (unfinished) head and seat is an optional upgrade. Laminated 2 1/8" insulated head and seat is optional with exterior vinyl extruded capping system. Front edge of head and seat are sealed against moisture with an aluminum foil backed ice and water shield before extruded vinyl capping is applied and sealed.

Insulated Glass

Double or triple insulating glass with Edgetech silicone foam low conductive S-Class Super Spacer®. Pilkington Energy Advantage ™ Low E (hard coat) glass is standard. Cardinal Lodz-366® (soft coat) glass is optional as well as Pilkington Activ™ Self-Cleaning glass. Laminated glass is available consisting of 3mm glass, 3/8" airspace and two 3mm glass panes with a .030" clear interior membrane in-between. Heavy inert argon or krypton gas is optional for the air space between the glass panes.

Glazing

Insert neoprene setting blocks around perimeter of sash with application of silicone toe bead sealant to interior glazing cavity to stabilize glass movement. Furnish laid in insulated glass from interior side of sash against flexible vinyl fin weather-strip coextruded to exterior edge of sash. Install interior glazing stops with flexible co-extruded vinyl fin weather-strip against interior glass face.

Weather-Stripping

The combination of flexible vinyl bulb type and water repellant pile weather-strips with stiff fin type vapor barrier ensures maximum energy efficiency. See specifications of individual window types used in Bay or Bow for specific weather-strip detail.

Hardware

Hardware is dependent on types of windows used in Bay & Bow configurations. Grip-Tite™ cable support system is available for projected Bay and Bow windows.

Hardware Options

Refer to specifications for specific window type used in Bay or Bow for hardware options.

Screen

North Star screens are roll formed from heavy duty thick aluminum coil flatstock and screened with anti-glare fiberglass cloth. Screen frame is available in a variety of standard colors and laminates depending on window style.

Exterior and Interior Finishes

North Star standard vinyl extrusion has a clean, bright, white smooth finish. Nine North Star exterior textured color finishes (Ivory, chestnut brown, Cocoa, Hickory, Sandalwood, Sable, Espresso, Midnight Black and Anthracite Grey) and four interior wood grains (Kolonial Oak, Stainable/Paintable Pine, Light Oak and Walnut) are optional. Exterior color and interior wood grain are applied PVC laminate film with an acrylic overlay for exceptional UV protection. Exterior laminate is 200µm (microns) thick.

Special option: Espresso, Midnight Black, and Hickory laminate are available on interior and exterior of the windows.

Grilles

Windows may be enhanced with North Star 5/16" narrow and 5/8" wide flat rectangular or 5/8" wide contoured grilles between the glass panes. 5/16" narrow grilles are available in white, pewter and brass. A combination of white or wood grain interior and colored exterior is optional for 5/8" wide flat grilles. 5/8" wide flat grilles are available in pewter, white or black on all sides. Contoured 3/4" wide grilles are optional in white or white/colored exterior.

Divided Lites

Classic simulated divided lites (SDL) are also available. SDL grilles are available in 7/8" and 2" widths. Standard SDL comes without airspace grille. Optional 1/4" X 5/16" pewter airspace grilles are available on double glazed units only. SDL grille bars are permanently applied to the interior and exterior glass surface.

Accessories

North Star offers a variety of vinyl accessories such as nailing fin, brick molds, drywall/wood return, couplers and jamb extensions.

Standards

North Star windows have been tested by an independent laboratory for air, water, structural and thermal performance requirements.

Factory Assembled Bay and Bow Windows

North Star's unique bay and bow windows include the following features:

- Completely assembled with side jambs, including interior side capping to minimize trimming the cavity most common on bay and bow applications
- Exterior extruded vinyl capping on head and seat
- Head and seat with jambs include edge banding, which allows the option of a reveal when installing the casing trim
- Stretch-wrapped packaging on a shipping skid to avoid damage to the unit
- Air spaces behind window couplers are insulated with fiberglass batt insulation

Our standard head and seat is constructed of maintenance-free, 3/4" white Formica®.

Other Options Include:

- Medium oak veneer (unfinished). We recommend this veneer be waterproofed immediately following
 installation to provide adequate protection to the finish
- 2-1/8" insulated laminated system with exterior extruded vinyl capping
- "Grip-Tite"™ CABLE SUPPORT SYSTEM:
 - A great alternative for supporting bay and bow windows
 - Bay or bow windows must be supported to avoid sagging. Failing to do so will void all warranty

• BRICKMOLD:

- Available only on bay and bow windows without head and seat
- Used mostly for new construction and walk-in bays and bows

30 Degree Bay Window Size Chart

Use the chart below to determine window sizes.

The left column is the total width of the bay window. The sizes shown in the columns next to this are the widths of the side lites and center lites.

When calculating window heights, be sure to deduct 1-1/2" for regular Formica® head and seat, and 4-1/4" for insulated head and seat.

Standard jamb is 6".

BAY WIDTH —

45 Degree Bay Window Size Chart

Use the chart below to determine window sizes.

The left column is the total width of the bay window. The sizes shown in the columns next to this are the widths of the side lites and center lites.

When calculating window heights, be sure to deduct 1-1/2" for regular Formica® head and seat, and 4-1/4" for insulated head and seat.

Standard jamb is 6".

Bay Width	Side Lite Width	Centre Lite Width	Total Projection With 6 Jamb
48	12.0000	23.97	12.94

Bay Window Installation Details

Note: All bay and bow windows must be supported to avoid sagging; failure to do so will void all warranty.

Cable Support System for Projection Windows – 1000 Series

The Cable Support System, featuring the straight line clamp is used to secure the cable to the window. The unique design features a "no-slip" function that locks the cable in place. This is key!

With other types of cable systems, a loop is formed. Should a problem develop afterwards, the weight of the window will collapse that loop – no matter how tightly it is drawn at installation – and the sagging problem will still occur.

With the straight line clamp, the cable is taut at final installation, and will remain that way. With the use of a cable support system, all sagging problems are virtually eliminated!

Caution:

Always use additional means of supporting the window during installation of Cable Support Systems.

CABLE SUPPORT KIT

Installation Instructions Straight Line Clamp

- 1. Select the mounting locations for the Straight Line Clamps. A, D, E
- Holding clamps in place, drive the mounting screws (#12 x 3" wood screws) halfway in, making sure the screws are straight. This will allow free operation of the clamps during cable installation.
 Note: The appropriate size Robertson bit is included with the cable support system. E
- 3. Check to ensure that the cable hex nuts have been placed 1" from the end of the threaded cable end. If not, adjust hex nut to the 1" specification. This requirement is for final adjustment purposes. C
- **4.** With window level, pull cables up and through the Straight Line Clamp. **A, F**
- **5.** With cables set to the correct distance, secure the Straight Line Clamps. **F**
- 6. Setting 18-volt drill to medium torque (12 to 14) while holding the cables tight through the clamps, evenly torque the four screws on each clamp. Then, set the drill to a higher torque (15 to 17) and, torque all screws in sequence. F
- 7. After cables are secure, adjust cable tension using pliers to hold threaded end of the cable. This will keep the cable from twisting as the hex nuts are tightened with a 1/2" wrench. Position window slightly above level so that only downward adjusting is required. Do not cut the threaded end of the cable as this will prevent future adjustment should it be needed. C

Position window slightly above level so that only downward adjusting is required.

Note: Double check for level and square before securing window to rough opening

Maximum and Minimum Sizes

Patio Door

SPECIFICATIONS

Frame and Sash

All frame and sash profiles are extruded by North Star Windows from virgin PVC powder material. Frames and sash are multi-chamber design for strength and energy efficiency. Extruded frame is mechanically fastened at corners and sealed with one-sided adhesive backed closed cell polyethylene gaskets. The door frame's low-profile sill is fitted with an extruded anodized aluminum screen track. Extruded sash is fusion welded ensuring a water and airtight seal. Sash is metal reinforced providing superior rigidity. Frames are a full 5 7/8" in depth.

Insulated Glass

Tempered double or triple insulated glass with low conductivity Edgetech silicone foam, warm edge spacer and evacuated chamber filling with Argon gas. The insulated glass unit is available in a variety of coated glass options including Cardinal LowE180 (High solar heat gain), Cardinal LowE366 (Low solar heat gain) and Cardinal 272 glass for blinds. The insulated glass unit is built with 3mm glass and ½" air space, or 4mm glass with 7/16" air space. The bronze and grey tint options are available in 5mm glass with 7/16" air space. Internal white mini blinds that raise, lower and tilt are also available between the glass panes

Glazing

Insert neoprene setting blocks around the sash perimeter with silicone toe bead sealant application to the interior glazing cavity to stabilize glass movement. Furnish laid in insulated glass from interior side of sash against flexible vinyl fin weather-strip co-extruded to exterior edge of sash. Install interior glazing stops with flexible co-extruded vinyl fin weather strip against the interior glass face

Weather-Stripping

The door utilizes the following seals: Triple weather-strip comprising of mohair pile weather-strips with stiff fin type vapor barrier, gasket compression type bulb seals and closed cell foam enclosed in Vulcanized rubber. Around the operating panel on the sill and head the door utilizes four layers of the low friction water replant triple weather strip. In the meeting rail Two water-repellant pile weather strips with and two bulb-type compression gaskets are used. Three triple weather-strips are used on the lock side with additional gasket compression type bulb seals. Around the fixed panel two closed cell foam and two triple weather-striping are installed

Hardware

Opening panel is equipped with two tandem roller assemblies with noise and friction reducing nylon rollers with stainless steel ball bearings. Multipoint point (keyless) lock and keeper are standard. Multipoint and single point lock is available in 10" and 8" handle respectively.

Hardware Options

Every door manufactured comes equipped with a standard white or black single-point and multi point locking mechanism. For added assurance, single and multi-point keyed locks and easy-to-use security bolt and

security bar are also available. Satin Nickle, black and white handles are available in multipoint lock only.

Screen

North Star heavy duty extruded aluminum screen frame with adjustable steel rollers, screened with anti-glare fiberglass cloth. Screen frame is available in white and North Star's nine standard exterior colors.

Exterior and Interior Finishes

The Fusion Colour Wrap™ application process is a sophisticated method used to prevent our colours from chipping or peeling like paint can over time. All ComfortStar™ sliding patio doors come with a generous assortment of exterior colour options. We offer 9 UV-resistant exterior laminated traditional and architectural colours, all of which match our Series 1000 windows.

Virtually indistinguishable from real wood, our interior colour overlays in walnut, light oak, and kolonial oak offer the warmth and comfort of a real wood finish. If colour matching to pre-existing paint colours or finishes, our woodgrain stainable and paintable overlay is the perfect solution. Our midnight black, espresso, and hickory overlays are available on the interior with a matching exterior.

<u>Special options</u>: Espresso, Hickory and Midnight Black are available for patio doors interiors as well as exterior.

Grilles

Create a unified, timeless aesthetic through the use of traditional or contemporary grilles, available in four sleek profiles: 1/4" flat, 5/8" flat, 3/4" contour and 7/8" SDL. Our Between the Glass (BTG) grilles are encased between the two panes of insulating glass, leaving a smooth surface that's a breeze to clean. 5/16" narrow grilles are available in white, pewter and brass.

Divided Lites

Classic simulated divided lites (SDL) are also available. SDL grilles are available in 7/8" and 2" widths. Standard SDL comes without air space grille.Optional1/4"X5/16" pewter airspace grilles are available on double glazed units only.

SDL grille bars applied to the outer surfaces of the insulated glass.

Blinds in Between Lites

North Star's internal mini-blinds are sealed between two panes of tempered safety glass. Finger tip controls allow the blinds to be raised or lowered and adjusted as needed to allow for light or privacy. No cleaning is ever required!

Accessories

North Star offers a variety of vinyl accessories such as nailing fin, brickmolds, drywall/wood return, couplers and jamb extensions.

Standards

North Star windows have been tested by an independent laboratory for air, water, structural and thermal performance requirements.

STC (Sound Transmission Class)

The ability of a window to reduce exterior noise is rated by its STC (Sound Transmission Class) or OITC (Outdoor-Indoor Transmission Class). In both cases, the higher the rating, the better the window is at reducing sound.

STC ratings give an indication of the reduction in high frequency sounds (voices, birds, etc.). OITC ratings, on the other hand, give an indication of the reduction in low frequency sounds (traffic, trains, etc.).

Laminated Glass to Reduce Sound Transmission

Laminated glass is highly effective in reducing noise, which in turn improves STC and OITC ratings. It is produced by permanently bonding two pieces of glass together with a tough plastic interlayer between them, keeping the layers of glass bonded – even when broken. Laminated glass also blocks 99.5% of the sun's ultraviolet rays, protecting furniture and flooring from fading.

North Star offers an insulated glass unit that is made up of 6mm laminated glass (3mm/3mm) to the exterior, and a standard 3mm glass to the room side. Having this mismatched glass effectively changes the frequency of the sound waves as they pass thought the insulated glass unit, reducing decibel levels.

Our standard dual pane insulated glass unit with two panes of 3mm glass (non-laminated) will typically have an STC rating of about 25-28. The use of 6mm laminate glass will improve STC ratings to approximately 32-35, depending on the type of window. Contact our Sales team for STC values.

Note: Total jamb depth (including window and extension) over 8-1/2" will have the extensions shipped loose. These will be pre-cut and pre-drilled for simple jobsite application. Wood return will be attached to the window.

Curved Jamb Extension

The nature of a laminated jamb extension allows for a certain amount of inward flexing to adjust the size, but **DO NOT spring it outward**, or it will delaminate.

The first nail should be installed at the center top of the jamb extension so that you can control the fit. Then nail alternately from right to left. This allows an even balance so that the jamb extension can be adjusted to fit, if necessary.

INWARD FLEX CHART FOR JAMB EXTENSION									
Inside Diameter	Flex In								
18" to 26"	3/4"								
27" to 36"	7/8"								
37" to 46"	1"								
47" to 66"	1-1/8"								
67" to 94-1/2"	1-1/4"								

Wood Trim Profiles

Product Installation Instructions

In the next section of the manual, we will go through each of one of our products and the minimum install requirement to maintain North Star warranty. The install instructions were created by utilizing industry known standards (CSA & SAWDAC) and certified NAFS testing.

For every product line, we compiled at least two different methods of anchoring the windows to the rough opening.

- 1. Installation of windows by screwing through the frame
- 2. Installation of windows by utilizing North Star contractor clip

Important information:

Anchoring the window through the **nail fin only** will void our warranty.

Deviating from the install instructions will impact the product rating.

When anchoring through the frame, you must seal/plug all holes created.

SERIES #1071 FIXED WINDOW (NO SASH)

METHOD 1: SCREWING THROUGH THE FRAME:

METHOD 2: USING A INSTALLATION CLIP/ ANCHOR

1.) Check rough opening to ensure that the window unit will fit. The rough opening should be 1/4" to 1/2" larger than the window, both horizontally and vertically.

METHOD 1: SCREWING THROUGH THE FRAME:

- Center frame in opening so there is equal space between the jambs of the frame and the jambs of the rough opening.
- 3.) Shim sill so it is level and 1/8" to 1/4" off the sill plate. Shim placement should be 5" in from each corner and then at approximately 16" intervals around the window. Do not install shims at the head. Recommendation: shims at the sill should be placed beneath insulating glass unit setting blocks (lift the glass stop at the sill to ensure correct shim placement). Check: Shims should be firm but not tight enough to cause the jambs to bow. Check: level, plumb and squareness of frame and adjust shims if necessary 4.) At each shim location, drill a 3/8" diameter hole through first wall of the interior frame. Drill additional holes at the head parallel to the shims at the sill.
- 5.) Install using suggested #8 x 2-1/2" screws at each of these locations being careful not to bow frame. Screw length is dependent upon framing structure and must be of sufficient length to securely anchor unit in opening.
- 6.) Cap the 3/8" diameter holes with 3/8" plastic hole plugs.
- Insulate between the window frame and the rough-opening, ensuring all voids are filled. Caution must be exercised not to over pack the insulation, causing unit frame to distort.
- 8.) Seal and trim window inside and out to suit application.

METHOD 2: USING A INSTALLATION CLIP/ANCHOR

- Place the galvanized steel strap anchor clips 2" in from each corner and then at approximately 16" intervals around the window.
- 3.) Center frame in opening so there is equal space between the jambs of the frame and the iambs of the rough opening.
- 4.) Shim sill so it is level and 1/8" to 1/4" off the sill plate. Shim behind each clip location so that the window is level, plumb and square. Do not install shims at the head. Recommendation: shims/clips at the sill should be placed beneath insulating glass unit setting blocks (lift the glass stop at the sill to ensure proper shim placement).

Check: Shims should be firm but not tight enough to cause the jambs to bow. Check: level, plumb and squareness of frame and adjust shims if necessary

- 5.) Install using suggested #8 x 2-1/2" screws at each of these locations
- Insulate between the window frame and the rough-opening, ensuring all voids are filled.

Caution must be exercised not to over pack the insulation, causing unit frame to distort.

8.) Seal and trim window inside and out to suit application.

Strap
Anchor

SERIES #1072 PICTURE WINDOW (WITH SASH)

Page 1:2

METHOD 1: SCREWING THROUGH THE FRAME: (DOUBLE GLAZED/ TRIPLE GLAZED)

- 1.) Check rough opening to ensure that the window unit will fit. The rough opening should be 1/4" to 1/2" larger than the window, both horizontally and vertically.
- 2.) Center frame in opening so there is equal space between the jambs of the frame and the jambs of the rough opening.
- 3.) Shim sill so it is level and 1/8" to 1/4" off the sill plate. Shim placement should be 5" in from each corner and then at approximately 16" intervals around the window. Do not install shims at the head. Recommendation: shims at the sill should be placed beneath insulating glass unit setting blocks (lift the glass stop at the sill to ensure correct shim placement).

Check: Shims should be firm but not tight enough to cause the jambs to bow. Check: level, plumb and squareness of frame and adjust shims if necessary

Double Glazed

- 4.) At each shim location, drill a 3/8" diameter hole through first wall of the interior frame. Drill additional holes at the head parallel to the shims at the sill.
- 5.) Install using suggested #8 x 2-1/2" screws at each of these locations being careful not to bow frame. Screw length is dependent upon framing structure and must be of sufficient length to securely anchor unit in opening.
- 6.) Cap the 3/8" diameter holes with 3/8" plastic hole plugs.

Triple glazed units

- 4.) With triple glazed units, there is not enough room behind the glass stop to drill and use the plastic hole plugs.
- When installing triple glazed units, for safety reasons, remove one stop, (refer to separate instruction sheet for stop removal and insertion or visit the dealer section of the North Star web site at www.northstarwindows.com for details). Once stop has been removed, at each shim location drill a 3/8" diameter hole, through the first and second walls of the interior frame. Note: hole location to be hidden when glass stop is reapplied. Drill additional holes at the head parallel to the shims at the sill.
- 5.) Install using suggested #8 x 2-1/2" screws at each of these locations being careful not to bow frame. Screw length is dependent upon framing structure and must be of sufficient length to securely anchor unit in opening.
- 6.) After installing glass stop, repeat procedure for each of the remaining stops.
- 7.) Insulate between the window frame and the rough-opening, ensuring all voids are filled. Caution must be exercised not to over pack the insulation, causing unit frame to distort.
- 8.) Seal and trim window inside and out to suit application.

Page 2:2

SERIES #1072 PICTURE WINDOW (WITH SASH)

SHIMMING/ANCHOR LOCATIONS DEPENDING ON UNIT SIZE

METHOD 2: USING A INSTALLATION CLIP/ ANCHOR

- 1.) Check rough opening to ensure that the window unit will fit. The rough opening should be 1/4" to 1/2" larger than the window, both horizontally and vertically.
- 2.) Place the galvanized steel strap anchor clips 2" in from each comer and then at approximately 16" intervals around the window.
- 3.) Center frame in opening so there is equal space between the jambs of the frame and the jambs of the rough opening.
- 4.) Shim sill so it is level and 1/8" to 1/4" off the sill plate. Shim behind each clip location so that the window is level, plumb and square. **Do not install shims at the head**. Recommendation: shims/clips at the sill should be placed beneath insulating glass unit setting blocks (lift the glass stop at the sill to ensure proper shim placement).

Check: Shims should be firm but not tight enough to cause the jambs to bow.

Check: level, plumb and squareness of frame and adjust shims if necessary

- 5.) Install using suggested #8 x 2-1/2" screws at each of these locations
- Insulate between the window frame and the rough-opening, ensuring all voids are filled. Caution must be exercised not to over pack the insulation, causing unit frame to distort.
- 8.) Seal and trim window inside and out to suit application.

SERIES #1171 CASEMENT WINDOW

SHIMMING/ANCHOR LOCATIONS DEPENDING ON UNIT SIZE

Page 1:2

METHOD 1: SCREWING THROUGH THE FRAME

Insulate complete perimeter between window frame and window opening.

- 1.) Check rough opening to ensure that the window unit will fit. The rough opening should be 1/4" to 1/2" larger than the window, both horizontally and vertically.
- 2.) Center frame in opening so there is equal space between the jambs of the frame and the jambs of the rough opening.
- 3.) Shim sill so it is level and 1/8" to 1/4" off the sill plate. Shim placement should be 5" in from each corner and then at approximately 16" intervals around the window. Do not shim at the head and place additional shims at the sill below the roto operator.

Check: Shims should be firm but not tight enough to cause the jambs to bow. Shims at the head should be loose to ensure window operation as the house settles. Check: level, plumb and squareness of frame and adjust shims if necessary

- Remove screen.
- 5.) Open sash fully. Install using suggested #8 x 2-1/2" screws at each of the sill location.
- Install using suggested #8 x 2-1/2" screws at the center of the head locations, add additional screws if needed.

Screw length is dependent upon frame structure, screw length must be of sufficient length to securely anchor unit in opening.

Screw position is 5/8" away from frame internal wall as shown above.

- Install screws at each of the side jamb shim locations.
- 8.) IMPORTANT: Seal screw heads in bottom of frame (sill) with silicone.
- 9.) Close sash and before locking, visually inspect the exterior of the window to ensure that the gap between frame and sash members remain constant. If operator fails to open, close or lock properly, verify sill and jambs are square using the measuring tape to cross measure comer to corner (square openings have equal cross measurements). The window can be readjusted by loosening the screws, leveling, shimming and re-tightening them as required.
- 11.) Insulate between the window frame and the rough-opening, ensuring all voids are filled. Caution must be exercised not to over pack the insulation, causing unit frame to distort
- 12.) Seal and trim window inside and out to suit application.

SERIES #1171 CASEMENT WINDOW

METHOD 2: USING A INSTALLATION CLIP/ ANCHOR

Page 2:2

- 1.) Check rough opening to ensure that the window unit will fit. The rough opening should be 1/4" to 1/2" larger than the window, both horizontally and vertically.
- 2.) Place the galvanized steel strap anchor clips 2" in from each corner and then at approximately 16" intervals around the window.
- 3.) Center frame in opening so there is equal space between the jambs of the frame and the jambs of the rough opening.
- 4.) Shim sill so it is level and 1/8" to 1/4" off the sill plate. Shim behind each clip location so that the window is level, plumb and square.

DO not shim at the Head. Additional shims & clips at the sill must be place at the sill below the roto operator.

Check: Shims should be firm but not tight enough to cause the jambs to bow.

Check: level, plumb and squareness of frame and adjust shims if necessary

- 5.) Install using suggested #8 x 2-1/2" screws at each of these locations
- 6.) Insulate between the window frame and the rough-opening, ensuring all voids are filled.

Caution must be exercised not to over pack the insulation, causing unit frame to distort.

7.) Seal and trim window inside and out to suit application.

Strap Anchor

Page 1:2

SERIES #1173 AWNING WINDOW

Two approved installation methods:

Screwing through the frame or using installation clip

METHOD 1: SCREWING THROUGH THE FRAME

Insulate complete perimeter between window frame and window opening.

SHIMMING/ANCHOR LOCATIONS DEPENDING ON UNIT SIZE

INTERIOR

EXTERIOR

Seal and trim interior and exterior of unit perimeter.

- 1.) Check rough opening to ensure that the window unit will fit. The rough opening should be 1/4" to 1/2" larger than the window, both horizontally and vertically.
- 2.) Center frame in opening so there is equal space between the jambs of the frame and the jambs of the rough opening.
- 3.) Shim sill so it is level and 1/8" to 1/4" off the sill plate. Shim placement should be 5" in from each corner and then at approximately 16" intervals around the window. Do not shim at the head. Additional shims must be placed at the sill below the roto operator.

Check: Shims should be firm but not tight enough to cause the jambs to bow. Shims at the head should be loose to ensure window operation as the house settles. Check: level, plumb and squareness of frame and adjust shims if necessary

- 4.) Remove screen.
- Open sash fully. Install using suggested #8 x 3" screws at each of the sill and head shim locations, being careful not to bow frame.

Screw length is dependent upon frame structure, screw length must be of sufficient length to securely anchor unit in opening.

Screw position is 5/8" away from frame internal wall as shown above.

- 7.) Install screws at each of the side jamb shim locations.
- IMPORTANT: Seal screw heads in bottom of frame (sill), with silicone.
- 9.) Close sash and before locking, visually inspect the exterior of the window to ensure that the gap between frame and sash members remain constant. If operator fails to open, close or lock properly, verify sill and jambs are square using the measuring tape to cross measure corner to corner (square openings have equal cross measurements). The window can be readjusted by loosening the screws, leveling, shimming and re-tightening them as required.
- 10.) Install screen.
- 11.) Insulate between the window frame and the rough-opening, ensuring all voids are filled. Caution must be exercised not to over pack the insulation, causing unit frame to distort.
- 12.) Seal and trim window inside and out to suit application.

SERIES #1173 AWNING WINDOW

Two approved installation methods: Screwing through the frame or using installation clip

METHOD 2: USING A INSTALLATION CLIP/ ANCHOR

- 1.) Check rough opening to ensure that the window unit will fit. The rough opening should be 1/4" to 1/2" larger than the window, both horizontally and vertically.
- 2.) Place the galvanized steel strap anchor clips 2" in from each corner and then at approximately 16" intervals around the window.
- 3.) Center frame in opening so there is equal space between the jambs of the frame and the jambs of the rough opening.
- 4.) Shim sill so it is level and 1/8" to 1/4" off the sill plate. Shim behind each clip location so that the window is level, plumb and square.

Do not shim at the head.

Additional shims & clips at the sill must be place at the sill below the roto operator.

Check: Shims should be firm but not tight enough to cause the jambs to bow.

Check: level, plumb and squareness of frame and adjust shims if necessary

- 5.) Install using suggested #8 x 2" screws at each of these locations
- Insulate between the window frame and the rough-opening, ensuring all voids are filled. Caution must be exercised not to over pack the insulation, causing unit frame to distort.
- 7.) Seal and trim window inside and out to suit application.

Strap () O O

- Do not cut center banding.
- 2.) Check rough opening to ensure that the window unit will fit. Rough opening should be 1/4" to 1/2" larger than the window, both horizontally and vertically.
- 3.) Center frame in opening so there is equal space between the jambs of the frame and the jambs of the rough opening.
- 4.) Unlock window and slide both sashes to center.
- 5.) Locate head and sill snap-in covers on the interior track and remove them by inserting a sharp chisel and prying.
- 6.) Shim sill so it is level and 1/8" to 1/4" off the sill plate.
- 7.) Shims the sill: 5" inch from each end and at 16"inch intervals. (Do not over shim and do not shim the head)
- 8.) Install screws through frame header in tracks where head cover was removed, 5° inches from each corner and in the center. Be careful not to bow frame.
- NS Suggest using #8 x 2-1/2" screws. Screw length is dependent upon frame structure, screw length must be of sufficient length to securely anchor unit in opening.
- 9.) IMPORTANT: When anchoring unit through sill/jamb, place screws at shim locations and seal screw heads with a good quality sealant.
- 10.) Close sashes and lock window.
- 11.) Shim <u>Jambs</u>, 5" from the head, 1" below the meeting rail and 5" from sill
- 12.) Check that frame members are plumb and square and check that the seal gap between the sashes and frame is uniform across the entire window. Add shims if necessary and make sure that the distance between shims around the entire window does not exceed 16" inches.
- Cut and remove center banding.
- Raise lower sash completely and tilt sash inward.
- 15.) Fasten screws into interior track between pivot shoe (square nylon block which locks when sash is tilted inwards) and bottom of the balance.

*Do not put screws in path of pivot shoe as this would hinder the operation of the window.

- 16.) Tilt lower sash back into frame and check that the gap between sash and frame remain constant over the entire height of the window.
- 17.) Remove inside sash stops (top inside track) and fasten screws into shim location
- 18.) Fasten screws into the bottom shim locations, then insert all covers and sash stops back to original position.
- 19.) Once all installation screws have been installed, re-verify that the unit has remained level, plumb and square. The window unit can be readjusted by loosening the screws, leveling, shimming and re-tightening them as required.
- 20.) Insulate between the window frame and the rough opening, ensuring all voids are filled. Caution must be exercised not to over pack the insulation causing unit frame to distort.
- 21.) Seal and trim window inside and out to suit application

Page 2:2

SERIES #1271 DOUBLE HUNG TILT WINDOW

- 1.) Check rough opening to ensure that the window unit will fit. The rough opening should be 1/4" to 1/2" larger than the window, both horizontally and vertically.
- 2.) Place the galvanized steel strap anchor clips 2" in from each comer, at the meeting rail and then at approximately 16" intervals around the window.
- 3.) Center frame in opening so there is equal space between the jambs of the frame and the jambs of the rough opening.
- 4.) Shim sill so it is level and 1/8" to 1/4" off the sill plate. Shim behind each clip location so that the seal gap between the sashes and frame is uniform across the entire window. Do not place shims at the head. Add shims if necessary.
- Check: Shims should be firm but not tight enough to cause the jambs to bow.
- Check: level, plumb and squareness of frame and adjust shims if necessary
- 5.) Install using suggested #8 x 2" screws at each of these locations
- 6.) Insulate between the window frame and the rough-opening, ensuring all voids are filled. Caution must be exercised not to over pack the insulation, causing unit frame to distort.
- 7.) Seal and trim window inside and out to suit application.

Strap Anchor

Page 1:2

SERIES #1272 (DOUBLE) SLIDER TILT WINDOW

- 1.) Do not cut center banding.
- 2.) Check rough opening to ensure that the window unit will fit. Rough opening should be 1/4" to 1/2" larger than the window, both horizontally and vertically.
- 3.) Center frame in opening so there is equal space between the jambs of the frame and the jambs of the rough opening.
- Unlock window, and slide sashes to center.
- 5.) Locate side jamb covers (snap in covers, located with weatherstripping at each end of the window) and remove them by inserting a sharp chisel and prying them out.
- 6.) Shim side jamb frame members 5" from top and bottom and approximately 16" intervals. Shims should be firm but not tight enough to cause the jambs to bow. Check level, plumb, and squareness of frame and adjust shims if necessary.
- 7.) Install screws through pockets of the frame where jamb covers were removed, at each shim location, being careful not to bow frame. Suggest using #8 x 2-1/2" screws. Screw length is dependent upon frame structure, screw length must be of sufficient length to securely anchor unit in opening.
- Snap jamb covers back into side jamb frame members.
- 9.) Close sashes and lock window.
- 10.) Shim frame sill members at center until frame members are level. Place additional shims 5" from each end and at 16" intervals. To ensure a proper seal the gap between sash and frame should be the same at the midpoint as at either end.
- Cut and remove center banding.
- Tilt innermost sash inward.
- 13.) Remove pocket cover from head and sill interior track.
- 14.) At the very center of the interior head and sill track, fasten unit through the frame using a #8 x 2-1/2" screw. Screw length must be of sufficient length to securely anchor unit in opening. Do not put screws in path of pivot shoe as this would hinder the operation of the window.
- 15.) IMPORTANT: When anchoring unit through sill/Jamb, seal screw heads with silicone.
- 16.) Snap pocket cover back into head and sill frame.
- 17.) Tilt sash back into frame and check that the gap between sash and frame remain constant over the entire width of the window. The window unit can be readjusted by loosening the screws, leveling, shimming and re-tightening them as required.
- 18.) Insulate between the window frame and the rough opening, ensuring all voids are filled.

Caution must be exercised not to over pack the insulation causing unit frame to distort.

19.) Seal and trim window inside and out to suit application.

Page 2:2

SERIES #1272 (DOUBLE) SLIDER TILT WINDOW

- 1.) Check rough opening to ensure that the window unit will fit. The rough opening should be 1/4" to 1/2" larger than the window, both horizontally and vertically.
- 2.) Place the galvanized steel strap anchor clips 2" in from each corner, at the meeting rail and then at approximately 16" intervals around the window.
- 3.) Center frame in opening so there is equal space between the jambs of the frame and the jambs of the rough opening.
- 4.) Shim sill so it is level and 1/8" to 1/4" off the sill plate. Shim behind each clip location so that the seal gap between the sashes and frame is uniform across the entire window. Do not shim Add shims if necessary.

Check: Shims should be firm but not tight enough to cause the jambs to bow.

Check: level, plumb and squareness of frame and adjust shims if necessary

- 5.) Install using suggested #8 x 2" screws at each of these locations
- 6.) Insulate between the window frame and the rough-opening, ensuring all voids are filled.

Caution must be exercised not to over pack the insulation, causing unit frame to distort.

7.) Seal and trim window inside and out to suit application.

Strap Anchor

Page 1:2

SERIES #1273 DOUBLE SLIDER LIFTOUT WINDOW

SHIMMING LOCATIONS DEPENDING ON UNIT SIZE

- 1.) Do not cut center banding.
- 2.) Check rough opening to ensure that the window unit will fit. Rough opening should be 1/4" to 1/2" larger than the window, both horizontally and vertically.
- 3.) Center frame in opening so there is equal space between the jambs of the frame and the jambs of the rough opening.
- 4.) Unlock window, and slide sashes to center.
- 5.) Locate side jamb covers (snap in covers, with weatherstripping on left side jamb, and flat pocket cover on right side jamb of window) and remove them by inserting a sharp chisel and prying.
- 6.) Shim side jamb frame members 5" from top and bottom and approximately 16" intervals. Shims should be firm but not tight enough to cause the jambs to bow. Check level, plumb, and squareness of frame and adjust shims if necessary.
- 7.) Install screws through pockets of the frame where jamb covers were removed, at each shim location, being careful not to bow frame. Suggest using #8 x
- 2-1/2" screws. Screw length is dependent upon frame structure, screw length must be of sufficient length to securely anchor unit in opening.
- Close sashes and lock window.
- 9.) Shim frame sill at center until frame members are level. Place additional shims 5" from each end and at 16" intervals.

To ensure a proper seal the gap between sash and frame should be the same at the midpoint as at either end.

- 10.) Cut and remove center banding.
- 11.) Remove interior sash.
- 12.) In exposed head track, fasten screws through frame at approximately 16" centers.
- 13.) Remove interior sill cover (snap in cover with weatherstripping), by prying with a sharp chisel, and then fasten screws through sill pocket.
- 14.) IMPORTANT: When anchoring unit through sill, place screws at shim locations and seal screw heads with NS approved silicone.
- 15.) Snap interior sill cover back into frame.
- Snap side jamb covers back into appropriate frame members.
- 17.) Put interior sash back into frame and check that the gap between sash and frame remain constant over the entire width of the window.

The window unit can be readjusted by loosening the screws, leveling, shimming and re-tightening them as required.

- 18.) Insulate between the window frame and the rough opening, ensuring all voids are filled.
- Caution must be exercised not to over pack the insulation causing unit frame to distort.
- 19.) Seal and trim window inside and out to suit application

Page 2:2

SERIES #1273 DOUBLE SLIDER LIFTOUT WINDOW

- 1.) Check rough opening to ensure that the window unit will fit. The rough opening should be 1/4" to 1/2" larger than the window, both horizontally and vertically.
- 2.) Place the galvanized steel strap anchor clips 2" in from each corner, at the meeting rail and then at approximately 16" intervals around the window.
- 3.) Center frame in opening so there is equal space between the jambs of the frame and the jambs of the rough opening.
- 4.) Shim sill so it is level and 1/8" to 1/4" off the sill plate. Shim behind each clip location so that the seal gap between the sashes and frame is uniform across the entire window. Add shims if necessary. Do not add shims to the head

Check: Shims should be firm but not tight enough to cause the jambs to bow.

Check: level, plumb and squareness of frame and adjust shims if necessary

- 5.) Install using suggested #8 x 2" screws at each of these locations
- Insulate between the window frame and the rough-opening, ensuring all voids are filled. Caution must be exercised not to over pack the insulation, causing unit frame to distort.
- 7.) Seal and trim window inside and out to suit application.

Page 1:2

SERIES #1371 SINGLE HUNG TILT WINDOW

- Do not cut center banding.
- 2.) Check rough opening to ensure that the window unit will fit. Rough opening should be 1/4" to 1/2" larger than the window, both horizontally and vertically.
- 3.) Center frame in opening so there is equal space between the jambs of the frame and the jambs of the rough opening.
- 4.) Unlock window and slide the operating sash to the center of the window.
- 5.) Locate head and sill snap-in covers on the interior track and remove them by inserting a sharp chisel and prying.
- 6.) Shim sill so it is level and 1/8" to 1/4" off the sill plate.
- 7.) Shims the window sill: 5" inch from each end and at 16"inch intervals.(Do not over shim and do not shim the head)
- 8.) Install screws through frame header in tracks where head cover was removed, parallel to sill shim location, being careful not to bow frame. Suggest using #8 x
- 2-1/2" screws. Screw length is dependent upon frame structure, screw length must be of sufficient length to securely anchor unit in opening.
- 9.) IMPORTANT: When anchoring unit through sill/Jamb, place screws at shim locations and seal screw heads with a good quality sealant.
- 10.) Close the operating sash and lock window.
- 11.) Shim Jambs, 5" from the head, 1" below the meeting rail and 1" from sill (or 1/2" from the bottom of the internal frame pocket with the sill cover removed)
- 12.) Check that frame members are plumb and square and check that the seal gap between the sash and frame is uniform across the entire window. Add shims if necessary and make sure that the distance between shims around the entire window does not exceed 16" inches.
- 13.) Cut and remove center banding.
- Raise sash completely and tilt sash inward.
- 15.) Fasten screws into interior track between pivot shoe (square nylon block which locks when sash is tilted inwards) and bottom of the balance.
- *Do not put screws in path of pivot shoe as this would hinder the operation of the window.
- 16.) Tilt sash back into frame and check that the gap between sash and frame remain constant over the entire height of the window.
- 17.) Remove inside sash stops (top inside track) and fasten screws into shim location
- 18.) Fasten screws into the bottom shim locations, then insert all covers and sash stops back to original position.
- 19.) Once all installation screws have been installed, re-verify that the unit has remained level, plumb and square. The window unit can be readjusted by loosening the screws, leveling, shimming and re-tightening them as required.
- Insulate between the window frame and the rough opening, ensuring all voids are filled. Caution must be exercised not to over pack the insulation causing unit frame to distort.
- 21.) Seal and trim window inside and out to suit application

Page 2:2

SERIES #1371 SINGLE HUNG TILT WINDOW

- Check rough opening to ensure that the window unit will fit. The rough opening should be 1/4" to 1/2" larger than the window, both horizontally and vertically.
- 2.) Place the galvanized steel strap anchor clips 2" in from each comer, at the meeting rail and then at approximately 16" intervals around the window.
- 3.) Center frame in opening so there is equal space between the jambs of the frame and the jambs of the rough opening.
- Shim sill so it is level and 1/8" to 1/4" off the sill plate.
- 5.) Shim behind each clip location. Check that the seal gap between the operating sash and the frame is uniform.

Add shims if necessary. Do not place shims at the head

Check: Shims should be firm but not tight enough to cause the jambs to bow.

Check: level, plumb and squareness of frame and adjust shims if necessary

- 6.) Install using suggested #8 x 2" screws at each of these locations
- 7.) Insulate between the window frame and the rough-opening, ensuring all voids are filled. Caution must be exercised not to over pack the insulation, causing unit frame to distort.
- 8.) Seal and trim window inside and out to suit application.

North Star Windows and Doors warranty is only valid, if one of these two methods are followed.

act tares

INSTALLATION INSTRUCTIONS SERIES #1372 SINGLE SLIDER LIFTOUT WINDOW Anchor Insulate complete perimeter between window frame and window opening. EXTERIOR Seal and trim interior and exterior of unit perimeter.

- 1.) Do not cut center banding.
- 2.) Check rough opening to ensure that the window unit will fit. Rough opening should be 1/4" to 1/2" larger than the window, both horizontally and vertically.
- 3.) Center frame in opening so there is equal space between the jambs of the frame and the jambs of the rough opening.
- 4.) Unlock window, and slide sashes to center.
- Locate side jamb covers (snap in covers, with weatherstripping on left side jamb, and flat pocket cover on right side jamb of window) and remove them by inserting a sharp chisel and prying.
- 6.) Shim side jamb frame members 5" from top and bottom and approximately 16" intervals. Shims should be firm but not tight enough to cause the jambs to bow. Check level, plumb, and squareness of frame and adjust shims if necessary.
- 7.) Install screws through pockets of the frame where jamb covers were removed, at each shim location, being careful not to bow frame. Suggest using #8 x
- 2-1/2" screws. Screw length is dependent upon frame structure, screw length must be of sufficient length to securely anchor unit in opening.
- Close sash and lock window.
- 9.) Shim frame sill members at center and place additional shims 5" from each end and at 16" intervals.

To ensure a proper seal the gap between sash and frame should be the same at the midpoint as at either end.

- 10.) Cut and remove center banding.
- 11.) Remove operating sash.
- 12.) In exposed head track, fasten screws through frame at the center, at 5" from each corner, and at 16" centers.
- 13.) Remove interior sill cover (snap in cover with weatherstripping), by prying with a sharp chisel, and then fasten screws through sill pocket.
- 14.) IMPORTANT: When anchoring unit through sill, place screws at shim locations and seal screw heads with NS approved silicone.
- Snap interior sill cover back into frame.
- Snap side jamb covers back into appropriate frame members.
- 17.) Put sash back into frame and check that the gap between sash and frame remain constant over the entire width of the window.

The window unit can be readjusted by loosening the screws, leveling, shimming and re-tightening them as required.

- 18.) Insulate between the window frame and the rough opening, ensuring all voids are filled.
- Caution must be exercised not to over pack the insulation causing unit frame to distort.
- 19.) Seal and trim window inside and out to suit application

- 1.) Check rough opening to ensure that the window unit will fit. The rough opening should be 1/4" to 1/2" larger than the window, both horizontally and vertically.
- 2.) Place the galvanized steel strap anchor clips 2" in from each comer, at the meeting rail and then at approximately 16" intervals around the window.
- 3.) Center frame in opening so there is equal space between the jambs of the frame and the jambs of the rough opening.
- 4.) Shim sill so it is level and 1/8" to 1/4" off the sill plate.
- Shim behind each clip location. Check that the seal gap between the operating sash and the frame is uniform.

Add shims if necessary.

Check: Shims should be firm but not tight enough to cause the jambs to bow.

Check: level, plumb and squareness of frame and adjust shims if necessary

- 6.) Install using suggested #8 x 2" screws at each of these locations
- 7.) Insulate between the window frame and the rough-opening, ensuring all voids are filled. Caution must be exercised not to over pack the insulation, causing unit frame to distort.
- 8.) Seal and trim window inside and out to suit application.

Thermal Values

Energy Star® - CANADA

Products may comply for Canada's Energy Star® program based on two compliance paths; either the product U-factor total or product Energy Rating (ER). The ER is based on a product's overall performance based on the following three criteria:

- 1) Solar heat gain
- 2) Heat loss through the frame, spacer and glass
- 3) Air leakage loss

The higher the ER number, the better the product's thermal performance

The U-factor and ER criteria for Canada are shown in the two tables below.

Table 2: U-factor Criteria for Residential Windows and Doors

Product	Maximum U-factor W/m ² ·K	Maximum U-factor Btu/h·ft²∘F
Windows and Doors	1.22	0.21

Table 3: Alternate ER Criteria for Residential Windows and Doors

Product	Minimum ER (unitless)
Windows and Doors	34

(the values above were obtained from the NRCAN website on January 1st /2020)

For more detailed information about the ER system and North Star products that qualify for Canada's Energy Star® program, visit the Energy star® website.

Energy Star® - USA

Energy Star® is a government-regulated program that was created by the Environmental Protection Agency (EPA), and the U.S. Department of Energy (DOE), to help consumers quickly and easily identify energy saving products. The Energy Star® program uses energy values obtained by window and door manufacturers through the National Fenestration Rating Council (NFRC) program. NFRC ratings are based on the energy performance of the total window or door – both glass and frame.

The Energy Star® program for the United States divides the nation into four separate climate zones – Northern, North-Central, South-Central, and Southern.

Windows

Climate Zone	U-Factor ¹	SHGC ²			
Northern	≤ 0.22	≥ 0.17	Prescriptive		
	= 0.23	> 0.25			
	= 0.24	≥ 0.35	Equivalent		
	= 0.25	≥ 0.40	Energy Performance		
	= 0.26	≥ 0.40			
North- Central	≤ 0.25	≤ 0.40			
South- Central	≤ 0.28	≤ 0.23			
Southern	≤ 0.32	≤ 0.23			

Air Leakage for windows ≤ 0.3 cfm/ft²

Swinging and Sliding Glass Doors

Glazing Level	U-Factor ¹	SHGC ²				
Opaque	≤ 0.17	No Rating				
≤ ½-Lite	≤ 0.23	≤ 0.23				
> 1/ Lita	≤ 0.26	Northern and North-Central	≤ 0.40			
> ½-Lite	≤ 0.28	Southern and South-Central	≤ 0.23			

Air Leakage for Sliding Doors ≤ 0.3 cfm/ft² Air Leakage for Swinging Doors ≤ 0.5 cfm/ft²

¹ Btu/h ft2.°F

² Solar Heat Gain Coefficient

North Star's Architectural Services Division was created to assist architects and design technicians to match North Star Products to your imaginations and visions. This consultant service exists to merge fenestration expertise and experience with creative visionaries who design to create and inspire.

Contact a North Star Sales Consultant to begin the North Star experience.

Contact us by email at architect@northstarwindows.com

North Star Territories Managers

North Star has a team of window and door professionals making regular calls on the architectural community in their region. These professionals are able to introduce architects and design technicians to local authorized North Star dealers and North Star window centers for detailed information, service and pricing. North Star representatives are available for informative product demonstration luncheons conducted at architectural offices, job site visits or any other function requiring their fenestration expertise.

Architectural Handbook

The North Star architectural handbook is the omnibus for all North Star technical details. It contains current information for all North Star products and accessories.

Product Samples and Displays

Portable product samples and displays are available through North Star representatives and the dealer network. These tools aid in understanding product differences and features. North Star products are displayed by its dealer network through showrooms and at trade and home shows throughout their communities.

Glossary of Terms

Acrylic – A synthetic resin or acrylic or methacrylic esters. Acrylics are known for their property of clarity

Active Panel – Primary operating door panel

Air Infiltration - Air that leaks in and out of a home or building through cracks in walls, windows and doors is considered "infiltration". The lower a window's air infiltration rating, the more airtight it is.

Argon Gas – An inert, colourless and odourless gas used to fill the airspace between insulating Low E glass

Argon and Krypton - Argon and krypton are odorless, colorless, non-toxic inert gases that can be used instead of air between panes of glass to increase insulation and energy efficiency. Argon is the cheaper, more readily available gas, but krypton is a better insulator in narrow air spaces. Often, manufacturers will use a blend of air, argon, and/or krypton to balance cost and performance.

Assembly - Single units mulled together

Awning Window – A combination of frame and sash, hinged to allow the unit to pivot from the top with the sash opening to the exterior of the building

Balances – A steel spiral rod and spring system used in the jamb liner of Double Hung or Single Hung units

Bay Window – A series of three windows installed with two flanker units and a center sash, forming an arc or a polygon. North Star bay windows can be built at one of two fixed angles: 30° or 45°

Bow Window – A series of adjoining window units, installed on a radius

Brickmold – An exterior molding of window and door frames that abuts the exterior facing material of the structure

Calendar – A machine for giving a gloss to cloth, paper, etc. by pressing between rollers

Cam Lock – A lever-operated lock which is used to prevent intrusion through the sash

Capillary Tubes – A tube inserted into the insulating glass spacer that allows the inside and outside air pressure to equalize in higher elevations

Casement Window – A combination of frame and sash, hinged to allow the unit to swing open from the side like a door, with the sash opening to the exterior of the building

Condensation - Condensation on windows occurs when the surface temperature of the glass (glazing), sash or frame is lower than that of the humid air around it. The moisture vapour in the air changes into liquid water on contact with these cold surfaces.

(Exterior) Condensation - Energy-efficient windows will occasionally have condensation on the exterior glass surface. This usually happens during periods of warm weather and high humidity near the time of sunrise. Because energy-efficient windows greatly reduce the amount of heat escaping to the outside (which is good during the long periods of cold weather), the exterior glass surface is cool enough to allow condensation to form for a short period of time.

Condensation Resistance (CR) - CR measures how well a product resists the formation of condensation. CR is reported on a scale of 1 to 100. The higher the number, the better a product is at resisting condensation.

Divided Lites – Division of lite by the use of muntin bars

Muntins: The actual bars that create a pattern in the window

Simulated Divided Lites: Muntins permanently adhered to the interior and exterior of the glass

Grilles: Muntins in between the glass panes to create the effect of divided lites

Double Hung – Double Hung windows have two movable sashes which operate vertically

Energy Rating System (ER) - A window's ER rating is a measure of its overall performance, based on three factors: 1) solar heat gains; 2) heat loss through frames, spacer and glass; and 3) air leakage heat loss. All window Energy Ratings (ER) are evaluated in the same way.

Energy Star® Symbol - The international Energy Star® symbol is a simple way for consumers to identify products that are among the most energy-efficient on the market. Only manufacturers and retailers whose products meet the Energy Star® criteria can label their products with this symbol. Choosing an Energy Star® labeled product over a conventional model could save you hundreds of dollars in energy costs.

Canada and the United States have long been involved in the Energy Star® program and utilize a zone default qualification schedule. Qualifications are based on "U-Factors" and "SHGC" (solar heat gain coefficient), or "ER Ratings" in Canada.

Extrusion – Compacting and melting a plastic material and forcing it through an orifice in a continuous fashion

Finger Joint – A series of fingers machined into the ends of two pieces of lumber to be joined together. They are then held firmly in position by adhesive. Finger-jointed wood is very strong and has a lesser chance of warping than a clear piece of wood of the same length does

Fold-Down Handle - Optional fold-down handles offer a sleeker profile, are less obtrusive to your opening and allow window treatments to close better.

Glass Size (GS) – The measurement of the actual glass, not the visible glass

Glazing – Installing glass into windows and doors

Glider/Slider – Horizontal operating units which have one sash fixed, while the other glides open and shut horizontally

Grilles - Contour and Flat grilles add a decorative element to windows and are available in many styles. Choose a standard size or customize to the dramatic shapes of our architectural windows. Available in white, Ivory, Hickory, chestnut brown, Cocoa, Sable, Sandalwood, black, brass and pewter. These grilles offer a perfect accent to any window.

Inactive Panel – Secondary operating door panel

Insulating Glass (IG) – Two panes of glass separated by a spacer and hermetically sealed together with dead air space between panes

Interior Casing – The casing trim used on the interior perimeter of the window or door. Generally supplied by others except in the case of round top casing, which is factory supplied

Jamb Extension – A jamb-like member, usually surfaced on four sides, which increases or extends the depth of the exterior or interior window or door frame; jamb extensions imply a larger depth than vinyl jamb liners

Laminated Glass – Glass composed of two sheets fused together with a sheet of transparent plastic between the sheets. When broken, laminated glass will generally not leave the opening

Laminating – A method of gluing strips of thin clear wood to the lengthwise surfaces of finger-jointed material to provide the appearance of clear stock

Low E Glass – Low E stands for low emissivity. The lower the emissivity, the higher the percentage of long-wave radiation blocked, thereby improving thermal performance. Low E glass is coated with a microscopic, virtually invisible metal or metallic oxide layer. The primary function is to reduce the U-Value by suppressing radiative heat flow. A secondary feature is the blocking of short wave radiation to impede heat gain

LoE 366 (Cardinal) - LoE 366 – Is recommended when cooling costs outweigh heating costs in your energy usage, or where summer discomfort from heat build-up should be an important concern. This is the best glass for most applications in a southern climate. It has a very high reflection rate of the radiant outside heat to prevent heat gain in summer and in winter it still retains radiant once you turn on your furnace! LoE 366 has a lower Solar Heat Gain Coefficient (SHGC) in order to minimize Solar Heat Gain that results in extra work for your air conditioning unit.

EA- Pilkington Energy Advantage— Pilkington Energy Advantage Low-E is the best glass for most applications in a northern climate. It has a very high retention rate of the heat in your home in winter and prevents heat gain in summer. Energy Advantage Glass has a higher Solar Heat Gain Coefficient (SHGC) than Low-E glass designed for southern climates. It provides free winter heat for your home. Since as much as 95% of your energy expense for heating and cooling combined is for heating, this glass is more cost effective than other glass without a high SHGC.

Masonry Opening – A brick, stone or block opening into which a window or door unit is installed, including the outside casing

Mulling – The act of attaching two or more window or door units together. The joint is then finished with a mullion center cap or coupler trim

Mullion – The vertical member of a sash, window or door frame between openings in a multiple opening frame

Multi-Lock Hardware – An adjustable lock system used to ensure a tight seal and provide a secure locking system

Multi-Point Locking System – A line of standard or optional multiple-point locking mechanisms installed on the operative panel(s)/sash of various North Star patio door products to enhance security and performance

Obscure Glass – Glass formed by running molten glass through special rollers. These rollers have a pattern on them causing the glass to become patterned and thus obscure

Operator – An operating sash, panel or unit

OTW-Pilkington Clear (OTW)— Pilkington Clear (OTW) is a low iron extra clear float glass with one of the highest visible transmission in the market. The glass is colorless and does not show the green cast that is produced by other clear glass manufacturers. It is perfect for the northern climate when coupled with EAC. This combination is called North Star polar white and it provides an excellent solar heat gain.

Organic (Chem) – Of, or pertaining to, compounds containing carbon. Inherent in, or pertaining to, the fundamental structure of something

OSM – Outside Measurement

Patina – The natural, ever-changing finish that occurs when copper or bronze is exposed to the elements. A patina can also be created using a solution to start a chemical reaction in the metal

Pitch – A term used to describe the angle of a roof. For example: A 4-12 pitch indicates that the roof rises 4" vertically for each 12" horizontally

Plastics (Chem) – One of a large class of synthetic organic compounds capable of being molded, extruded, cast or drawn into filaments

Plinth Block – A decorative wood block placed between the vertical casing and the top casing of a unit to provide an elegant interior casing profile

Polymer – Compound of high molecular weight formed by the chemical combination of two or more molecules of the same kind

Polyurethane – Any of various polymers that contain NHCOO linkages and are used especially in flexible and rigid foams, elastomers and resins (as for coatings)

Prime – The first coat of paint in an application that consists of two or more coats; also refers to the paint used for such an initial coat; primer

R-Value – The resistance a material has to heat flow. Higher numbers indicate greater insulating capabilities

Radius – The length of an imaginary line from the center point of a circle to the arc or circumference of a circle

Rail – The cross or horizontal member of the framework of a sash, door or other panel assembly

Resin – A powder-like substance that is derived from sodium chloride (raw salt) and natural gas

RF – The percent of visible light reflected from a glazing system

Roto Gear – A term used to describe the steel drive worm, gears and crank device used for opening standard Awnings and Casements

Rough Opening – The opening in the wall where a window or door unit is to be installed. Openings are larger than the size of the unit to allow room for insulation and to shim the unit square

Round Top – Generally a semicircular window that is mulled to the top of another window or door, thus forming the round top appearance

Sash – The operating and/or stationary portion of the window unit that is separate from the frame

Sash Lock – A locking device which holds a window shut

Screens – A close-mesh woven screen material used to inhibit entry of insects, yet permit light, air and vision

Screen Pull Tabs - Screen pull tabs are constructed from a durable nylon material and are installed as an integral part of the screen itself, for ease of removal.

Sidelite – A stationary or operating glass panel mulled to or installed next to a door

Sill – The horizontal member forming the bottom of a window or exterior door frame; the lowest member of the frame of a structure, resting on the foundation and supporting the frame

Single Hung – A window very similar to a Double Hung window, except that the top sash is stationary or non-operable

Solar Energy Transmittance – The percentage of the solar spectrum energy (ultraviolet, visible and near infrared) that is directly transmitted through the glass product

Solar Heat Gain Coefficient (SHGC) – The ratio of solar heat gain through a glazing system compared to that of an unobstructed opening

Solvent – A substance, generally a liquid, capable of dissolving other substances

Shading Coefficient – Relative measure of the total amount of solar energy that enters a building space through a glazing system compared to the total amount of solar energy that enters a building through a single 1/8" clear glass pane

Spacer – Used to separate the two pieces of glass in an insulating glass panel

Square Foot – For measuring the area of a unit. R.O. width (in inches) x R.O. height (in inches) divided by 144 equals a unit's area in square feet

Stile – The upright or vertical perimeter piece of a sash, panel or screen

Stool – A horizontal trim member that laps the windowsill above the apron and extends beyond the interior casing

Super Spacer - A highly UV-resistant and, flexible silicone foam designed as the spacer between glass panes in sealed unit production. Units constructed of super spacer satisfy the toughest warm edge demands by:

- resisting condensation
- reducing energy costs
- providing long-life durability
- reducing outside noise distractions

Tempered Glass – Float glass panels heated and then cooled rapidly in a controlled environment. This process makes the glass several times stronger than regular glass. It also makes it safer because when broken, it yields small pebble-like fragments

Template – A pattern of a window unit from which dimensions and measurements can be determined

Thermoplastics – Resins or plastic compounds which, in their final state as finished articles, are capable of being repeatedly softened by an increase of temperature and hardened by a decrease in temperature

Thermoset – A product that will become permanently rigid when heated or cured (a thermosetting resin)

U-Factor – A measure of total heat flow through a window or door barrier from room air to outside air. Lower numbers indicate greater insulating capabilities

% UV Transmittance – The percentage of ultraviolet radiated wavelengths allowed to be transmitted through the glazed product

Visible Light Transmittance (VLT) – The percent of visible light transmitted through a glazing system
